

The device that monitors and warns, preventing unwanted damage.

The **Muirhead® Low Oil/Fuel Warning Kits** are used to detect low fuel levels. When low-fuel level is detected, the LED will illuminate and the audible alarm will sound, providing you with adequate time to prevent unwanted machine equipment damage.

Rather than using a float switch, the **Low Oil/Fuel Warning Kit** uses an oil level switch due to its compact design and high resistance to vibration. It contains no moving parts, and the switch being isolated allows it to be used in an above ground application.

The probe's electronic circuitry is enclosed within a single sealed unit. The level sensor will suit any diesel fuel application for either mobile or stationary equipment.

Applications:

Mobile machines, commercial vehicles, generators, pumps and compressors, etc.

| Part Number | OE Number | Description |
|-------------|-----------|--------------------------------------|
| TBA | APN 8612 | Low Oil Level Kit (with 3072 Switch) |

Features

- Fully-sealed electronics
- Compact, robust design
- Monitors fuel level
- 5 second inbuilt delay
- 12 V / 24 V options available
- Prevents unnecessary maintenance repairs
- Avert costly downtime
- Improves equipment life

This may not be a stock item. Please speak to our sales representative about lead times. Lead times, price and availability can only be determined on receipt of an official quote from our supplier. This can sometimes take up to 3 days.
