

Protect machine and operator on dangerous inclines

When operating on inclines, operators need to know when they are approaching a dangerous incline angle that could cause a machine to roll over. The **Muirhead®** Incline Shutdown Controller has been designed to warn the operator when they are approaching dangerous inclines. An audible alert will notify the operator that he will need to reduce his operating incline if he continues to operate. If operation continues at the incline the machine will shut down. The delay is adjustable and the controller has an override function to allow restart when shut down has occurred. The override switch should only be operated to restart the machine and move it to a safe incline angle.

Features

- Simple to install
- Audible and visual warning
- Solid state
- Adjustable delay time
- Multi-voltage
- 35 degrees, 60 degrees and fully from 1 to 45 degrees adjustable controllers available

	Part Number	OE Number	Description
	T1800	APN 1800	Incline shutdown 35° detection
	T267515800	APN 4089	Incline shutdown 60° detection
	T6119	APN 6119	Control tilt dual axis adj. range 1 to 45 degrees
