

Easier Fault-Finding - Reduced Downtime - Facilitates Ease of Aftermarket Fitments - No Interference with OEM Harness

Trysome has worked hand-in-hand with OEMs to create the best possible solutions to ensure machines and equipment are always kept up to standard.

One of these solutions is our **TrylechHD Power Distribution Unit (PDU)**. The **PDU** is designed to allow for aftermarket fitments to be done on machines and equipment without the need to access the OEM harnessing.

Installing a **PDU** on machines and equipment makes fault finding easier and reduces downtime. The **PDU** consists of permanent power as well as ignition power outputs and has separate resettable fuses for each circuit.

The **PDU** can be customised to meet every machine's requirements and is suitable for the construction, agriculture, mining and heavy-duty trucking industries.

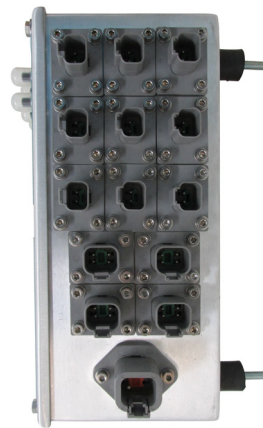

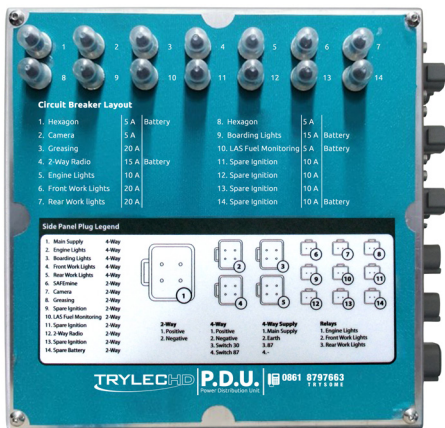

Features:

- 9 x 2-Way Outlets
- 4 x 4-Way Outlets
- Independent Resettable Fuses
- Engine Mounts for Vibration
- Isolated 12 V Ignition

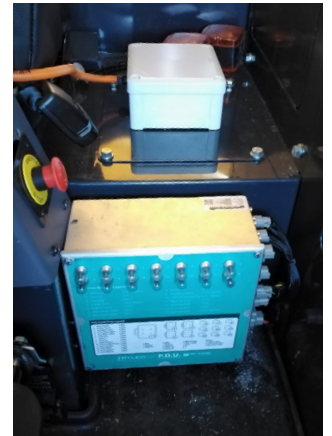

Benefits:

- Troubleshooting aftermarket fitments is quick and easy
- Cost-effective and reduces unnecessary downtime

We only use high-quality components like **TE Deutsch** plugs, **ETA** pop-up circuit breakers, **Alfatronix** power supplies and **Cole Hersee** main relays.

Installation on WA600-6 Wheel Loader
